TO WHOM IT MAY CONCERN

RE: Obichukwu Chukwudum Kosisochukwu, Male

Above named is a case of bronchial asthma with difficulty in breathing and was seen in this hospital with complaints of weakness, abdominal pain, chest tightness and chest pain.

Relatives confirmed she has been seen in several hospitals but problem persisted.

Examination showed a young man, afebrile, anicteric with breathlessness.

A preliminary diagnosis of bronchial asthma was made.

He has been on intranasal oxygen, ventoline, amilophilin, multivitamins, analgesics, hematinics with cardiac modulators to follow-up closely in clinic.

Kindly assist him to avoid all kind of strenuous activities and to stay where facilities available for adequate health care during his Youth Service Programme to avoid emergencies and to serve where his parent reside for necessary family support.

Please assist him.

Thanks.

DR. SAMUEL OKEREKE
For: Unit Consultant.
